EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The Abstract was not submitted on a separate sheet as required. To expedite prosecution, Examiner has provided the text submitted by Applicant as the Abstract on the attached sheet.

The Title was changed to the following:

--CONSTANT VOLTAGE CIRCUIT WITH PHASE COMPENSATION--

STATEMENT OF REASONS FOR ALLOWANCE

Many of the cited references disclose constant voltage circuits. The reference to Volk discloses a circuit having the most in common with the recited claims. Volk discloses a circuit comprising: "a reference voltage unit (VREF)"; "an output voltage detecting unit (R/4)"; "an output transistor (N31 or N11)"; "an error amplifying circuit unit (602)"; "an output current detecting unit (N32 or N12)"; "a first resistance (RM1)"; and "a proportional current supply (RM2)". However, the reference to Volk fails to disclose the recited "second resistance" and the "capacitor". Further, there is no motivation seen for modifying the reference to Volk to includes these elements. Thus, the case is in condition for allowance.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Terry Cunningham whose telephone number is 571-272-1742. The examiner can normally be reached on Monday-Thursday from 7:30 to 6:00.

ABSTRACT OF THE DISCLOSURE

A constant-voltage circuit uses a capacitor having a low ESR (equivalent serial resistance), such as a ceramic capacitor, for phase compensation, wherein a voltage drop of an output voltage due to a resistance provided for optimizing the phase compensation is compensated for by providing a current proportional to an output current to an output voltage detecting resistance through a current mirror circuit thereby the voltage drop of the output voltage is compensated for.
